An inviting and stylish design. A powerful but clean propulsion system. A slim and sporty electric car with a compact shape that requires only half of the road. Grey and drab are things of the past. I see green and clean cities with central hubs where everyone can easily unlock a car using their smartphone. I see world cities, companies and knowledge centres combining their knowledge and power. I see the future of mobility and urban transport.

I see YKS1... The electric car that energizes you.

STYLISH_&_CHARMING

One look is enough. Her sleek lines and smooth forms are seductive. The perfect balance between style and sport. The golden ratio between synthetic material and glass. You want to drive this thing. Zooming through the city centre heading to your appointment. Or back to the train station after visiting a business park on the outskirts of the city. You do not have the power or desire to resist the YKS1's charm. You want to be seen with her. And she with you.

CLEAN_&_SPORTY

Fast, sporty and agile. You feel the blistering clean power under your pedal. An electric drive with a modern range and sexy acceleration. Quietly float across the Coolsingel or head for the Kalverstraat. YKS1 is being developed for speeds of at least 80 kilometers per hour, making it extra safe for areas with a 50 kilometer per hour speed limit. Turn corners with the self-assurance of a race car driver. Lean in and glide through with control and stability thanks to the flexible swing suspension. YKS1 makes urban driving into an experience.

SLIM_&_SPACIOUS

Alone time with YKS1 is something to savour. Give her your attention and she'll give you energy in return. You're at the steering wheel, so you're in control. Another advantage of a single-seater is that you only need half of the road. Capacity problems and traffic jams in cities will become a thing of the past overnight. And despite her slender shape, she offers plenty of space for a suitcase, package or groceries. And rest assured: a comfortable seat.

GREEN_&_FRESH

Fine particles, nitrogen and CO2. We are sick of it. And so are our lungs. Our cities must and can be cleaner. It is no accident that we chose YKS1 as the name for our first vehicle of the future. YKS1 = one in Finnish. And look at that: Finland has been the European number one in the field of sustainability for years. Driven by renewable energy sources, Finland has become a leader in CO2 reduction. A shining green example and inspiration for our own YKS1.

With YKS1, we are heading in a new direction. A direction that helps cities fulfil their environmental and reduction promises. This has become more relevant than ever after the NGO 'Environmental Defense' sued the Dutch state and the judge ordered the Dutch state to do more to combat air pollution. We want to contribute to this with YKS1. Green HUBs on logistical nodes with clean, electric transport that is accessible to everyone. No oversized, three-quarters empty, polluting cars clogging up the city, but perfectly sized, flexible and clean passenger and freight transport.

KNOWLEDGE_&_STRENGTH/POWER

Sharing is the new having. We're not developing YKS1 for ourselves, but for everyone. Our main goal is to make the YKS1 a reality, which is why we will embrace every idea, initiative or advice that gets us closer to our goal. Help is welcome and knowledge = power. That's why we are happy to work with companies, governments, investors and knowledge centres in the Netherlands and abroad. Together we will pave the way to the right future.
